ance Notes on Codes and Abbreviations" appearing at the begin-
ning of each regular issue of the PCT Gazette.

(54) Title: POSTEINSTEIN-BOHR DEFINITIVE END AND DEVELOPMENT OF NEW PHYSICS WITH CONSEQUENCES
AS SUPERACCELERATORS AND DIRECT ELECTRICITY TRANSFORMATION INTO LIGHT

(57) Abstract: After spectacular End of classical genial
Einstein-Bohr Physics (PCT/IB00/00843, Exemplary
Search: "PCT Gazette" 4/2001), this development
of New Physics (combined PCT/FR0211308; /2583;
12709) crushes definitively ridiculous Construction of
Humanity Impass for centuries (including essential of
consecutive Modern Physics), making feasibility of
fantastical applications too evident: apriori agreement
about synchronism of distanced observers, ridiculous
trick of Schrödinger equation, quantum spin of separated
particles, special "law" of symmetry violation, famous
quarks are examples of Impass falseness. Oppositely,
developing network of New Physics is perfect. Nature of
electric and gravitational fields is definitively confirmed
with conducting electronic and muonic neutrinos (nu) and
antineutrino (anti-nu) with frequent periodic "trains" of
particle transformations. Contrary to 2nd Thermodynamic
law, all radiation does not leave Universe, because of
complete reflections from borders, behind which there is
no nu and anti-nu. At periodic Universe contractions, this

concentrated radiation makes Explosions (Big Bangs). "Gravitation lenses" are due to elevated nu and anti-nu concentrations near
colossal masses. Galaxies with disks (and spirals) are created by luminous exploded matter, seized by Black Holes. Overlight speeds
of (charged) cosmic "rays" guarantee almost complete passage through Sun and Moon, without interaction with electro-magnetic
fields of matter. Radioactivity is due to cause of knocking by such "rays" (protectable, changeable). Big Bang condition imitations
permit to create titanic stable temperatures. Increase of forces and speeds of directing electric and magnetic fields in accelerators
(with help of nu and anti-nu beams, also developed) produces particles with colossal overligh speeds. Such superaccelerators
produce radiation shorter than gamma, that could produce very frequent electric current, that could produce directly electromagnetic
waves (direct visible light too). Destruction (in any depth!) of targets can be done with special combination of such beams. Correct
falseness proofs of Michelson and of short pulses application in time-resolved spectroscopy.

INTERNATIONAL SEARCH REPORT

International Application No

PCT/IB 03/03315

A. CLASSIFICATION OF SUBJECT MATTER

IPC 7 G21K1/00

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)

IPC 7 G21K

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)

EPO-Internal, INSPEC, PAJ

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category *	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X,P	FR 2 819 930 A (ZAGYANSKY YULY) 26 July 2002 (2002-07-26) page 8, line 38 - page 9, line 21	2

☒ Further documents are listed in the continuation of box C.

☒ Patent family members are listed in annex.

* Special categories of cited documents:

- "A" document defining the general state of the art which is not considered to be of particular relevance
- "E" earlier document but published on or after the international filing date
- "L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- "O" document referring to an oral disclosure, use, exhibition or other means
- "P" document published prior to the international filing date but later than the priority date claimed

- "T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- "X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- "Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- "&" document member of the same patent family

INTERNATIONAL SEARCH REPORT

International application No.
PCT/IB 03/03315

Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)

This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☒ Claims Nos.: ¹
because they relate to subject matter not required to be searched by this Authority, namely:
see FURTHER INFORMATION sheet PCT/ISA/210
2. ☐ Claims Nos.:
because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:
3. ☐ Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

see additional sheet

As a result of the prior review under R. 40.2(e) PCT,
no additional fees are to be refunded.

1. ☐ As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☒ As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:
2,4,5,7
4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest

- ☒ The additional search fees were accompanied by the applicant's protest.
☐ No protest accompanied the payment of additional search fees.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

Continuation of Box I.1

Claims Nos.: 1

A meaningful search is not possible on the basis of claim 1 because it is directed to a scientific theory - Rule 39.1(i) PCT.
Only claims 2 -9 relate to applications of this scientific theory.
Although claims 2-9 are, directly or indirectly, depended on claim 1 and they therefore also include the scientific theory of claim 1, their subject-matter can be considered as being of technical nature because they comprise features of a process or a device.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

This International Searching Authority found multiple (groups of) inventions in this international application, as follows:

1. claim: 2

Changing half-life of radioactive isotopes by shielding cosmic rays

2. claim: 3

Creating ultra-high temperatures by eliminating neutrinos and antineutrinos

3. claims: 4,5,7

Changing of values of forces and propagation speeds of fields by increasing the concentrations of neutrinos and/or antineutrinos

4. claim: 6

Device for generating beams of neutrinos and/or antineutrinos from two beams of electrons and positrons

5. claim: 8

Utilization of electromagnetic waves of ultra-high frequency for generating electric current

6. claim: 9

Destruction of matter of targets by irradiating them with beams of omnipenetrating particles
